Why Us

"YOU CAN'T BEAT THE COST."

Jane Doe, Raleigh, NC

With a subscription to GroPRO Lawn DIY fertilization kits, you receive professional lawn care products teamed up with professional advice and support around the clock to assist even the most discriminating homeowner. Not only will your lawn look its best but the fertilization kit will be perfectly matched to your lawn size and grass type, eliminating excess fertilization which leads to runoff and harms our water supply. It's a triple win for your lawn, you, and the environment!

OUR PROCESS IS SIMPLE

STEP 1 - A certified turf grass professional comes out to your lawn to analyze what your grass needs to maintain healthy and weed free grass. The tech visit will include a free measurement of your lawn size, identify your grass type, take a soil sample, and identify your climatic location.

STEP 2 - The fertilizer is shipped to your door as you need the product. We don't want our customers to be bothered with trying to store bags of fertilizer that take up valuable garage space and become quickly buried under all the other outdoor items that our customers already have to store in the garage.

STEP 3 - Receive a text & email alert reminding you when and how to apply your fertilizer application. Our customers find that this simple service is one of the most helpful features we offer to keep you on top of your grass.

STEP 4 Apply the application- Simply open the bag of fertilizer, empty the entire bag into your broadcast spreader and spread the fertilizer evenly throughout your lawn. Remember, we have custom designed this program for you and have packaged the right amount of fertilizer for your lawn.
